Applicant's submission filed on 11/13/08 has been entered.

2. Applicant canceled claims 1-12.

Allowable Subject Matter

3. **Claims 13-17** are allowed.

4. **Claims 13-17** are renumbered.

5. The following is an examiner's statement of reasons for allowance:

Claim 13 is allowed because the closest prior art, Palusamy et al. (U.S. Patent No. 5,311,562) fails to anticipate or render obvious a thermal power plant maintenance service provision method using a thermal power plant maintenance system comprising a control device for control of plant equipment, a maintenance tool operatively coupled to said control device via a communication network for performing maintenance of said control device, and a remote maintenance device, remote from said thermal power plant, communicatively connected to said maintenance tool, said method including the steps of: transmitting, from said remote maintenance device, report data prepared by a maintenance service person based on the transmitted plant equipment data, including instructions for revising a control parameter of a control circuitry of said control device to

said maintenance tool; and saving said report data at said maintenance tool, wherein said control parameter is part of a control operation logic of the control circuitry and said control circuitry supports the control operation logic, in combination with the rest of the claim limitations as claimed and defined by the Applicant.

Claim 14 is allowed because the closest prior art, Palusamy et al. (U.S. Patent No. 5,311,562) fails to anticipate or render obvious a plant maintenance service provision method using a plant maintenance system comprising a control device for control of plant equipment, a maintenance tool operatively coupled to said control device via a communication network for performing maintenance of said control device and a remote maintenance device remote from said plant, communicatively connected to said maintenance tool comprising: transmitting, from said remote maintenance device, report data based upon the transmitted plant data, including instructions for revising a control parameter of a control circuitry of said control device to said maintenance tool and saving said report data at said maintenance tool, wherein said control parameter is part of a control operation logic of the control circuitry and said control circuitry supports the control operation logic, in combination with the rest of the claim limitations as claimed and defined by the Applicant.

Claim 15 is allowed because the closest prior art, Palusamy et al. (U.S. Patent No. 5,311,562) fails to anticipate or render obvious a plant maintenance system comprising: a remote maintenance device, remote from said plant, receiving plant equipment data from said maintenance tool and transmitting reporting data, based on said receive plant equipment data, including instructions for revising a control parameter

of a control circuitry of said control device to said maintenance tool wherein said control parameter is part of a control operation logic of the control circuitry and said control circuitry supports the control operation logic, in combination with the rest of the claim limitations as claimed and defined by the Applicant.

Claim 16 is allowed because the closest prior art, Palusamy et al. (U.S. Patent No. 5,311,562) fails to anticipate or render obvious a plant maintenance service provision method using a plant maintenance system comprising a control device of controlling an operation state and process amount of plant equipment, a maintenance tool operatively coupled to said control device via a communication network performing maintenance of a controlling controller built in said control device, and a remote maintenance device, remote to said plant, communicatively connected to said maintenance tool, said method including the steps of: transmitting, from said remote maintenance device, revision instruction data describing a revision to be applied to a control parameter of circuitry in said controlling controller from to said maintenance tool; and revising said control parameter of said circuitry of said control device according to said revision instruction data from said maintenance tool, wherein said control parameter is part of a control operation logic of the circuitry of said control device and said circuitry of said control device supports the control operation logic, in combination with the rest of the claim limitations as claimed and defined by the Applicant.

Claim 17 is allowed because the closest prior art, Palusamy et al. (U.S. Patent No. 5,311,562) fails to anticipate or render obvious a plant maintenance service system including a remote maintenance device, remote from said plant, to receive plant data

from said maintenance tool and to transmit revision instruction data describing a revision to be applied to a control parameter of a-circuitry in said controller, wherein said maintenance tool has a function of revising of said control parameter of said circuitry of said control device according to said revision instruction data, said control parameter is part of a control operation logic of the circuitry of said control device and said circuitry of said control device supports the control operation logic, in combination with the rest of the claim limitations as claimed and defined by the Applicant.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
